Proposed Solution :

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Traditional complaint management systems rely on manual processes, making it difficult to track complaints, ensure timely resolution, and maintain transparency. Users often face delays and lack visibility regarding complaint status.

2.	Idea / Solution description	The Online Complaint Registration System is a web-based application developed using the MERN Stack and MVC architecture. It allows users to register, log in, submit complaints, track complaint status, provide feedback, and view complaint history. Administrators can manage complaints, update statuses, and monitor the complaint resolution process through a <u>dedicated dashboard</u>. The system provides a centralized platform for complaint registration and tracking with real-time status updates. It integrates role-based access for users and administrators, improving transparency and efficiency in <u>complaint management</u>. The system improves communication between users and administrators, reduces response time, increases transparency, and enhances user satisfaction through efficient complaint <u>resolution</u>. The system can be offered as Software-as-a-Service (SaaS) to organizations, educational institutions, government departments, and private companies through subscription-based licensing.
3.	Novelty / Uniqueness	
4.	Social Impact / Customer	
5.	Satisfaction Business Model	
	(Revenue Model)	
6.	Scalability of the Solution	The MERN Stack architecture allows the system to scale easily by supporting a larger number of users, complaints, departments, and organizations without significant architectural changes.
