Maximum Marks	4 Marks

Solution Architecture:

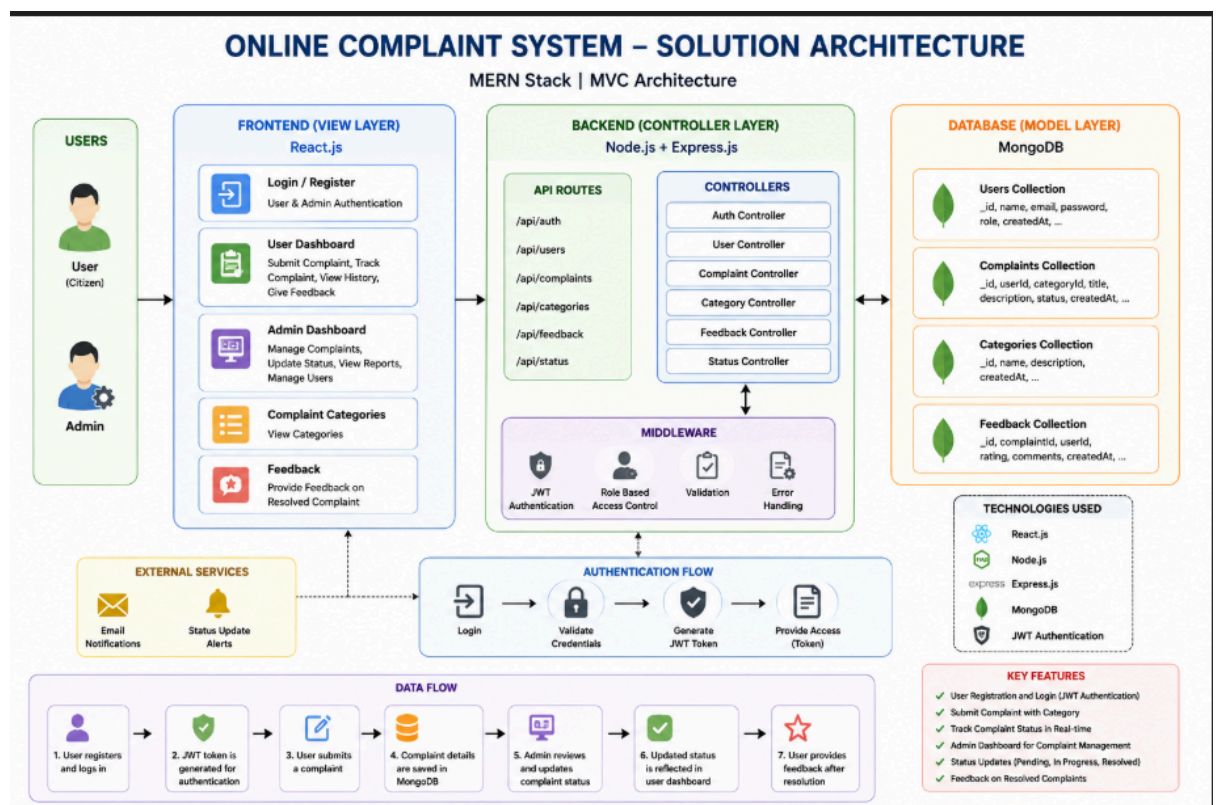

Figure 1: Architecture and data flow of the online complaint registration system

Brief Architecture Description

The Online Complaint Registration System is developed using the MERN Stack and follows the MVC (Model-View-Controller) architecture. The React.js frontend provides separate dashboards for users and administrators. The Node.js and Express.js backend handles business logic, authentication, and complaint management. MongoDB stores user, complaint, category, and feedback data. JWT authentication is used to secure access and implement role-based authorization. The system enables complaint submission, tracking, status updates, and feedback management.

Data Flow

**User → React Frontend → Express.js API → Controllers → MongoDB Database
→ Response to User/Admin Dashboard**
